

# Marshalls In Action

Chances are we've already invented it...

A powerful argument for cutting your development costs and time.

With over 500,000 Volkswagen Group components at our fingertips, there's a pretty good chance of us being able to help meet your design brief - whatever manufacturing sector you cover. And, our top quality, ready-to-use components can make a considerable impact on reducing your development costs, as well as saving you valuable time.

**Tested, proved and readily available.**

Our components are manufactured to the highest standards of quality. They have all been rigorously tested and are being proved day to day in the Volkswagen Group's extensive range of world class vehicles - renowned for their reliability.

In this way, we can assure you of good availability in whatever quantities you require.

**Meeting the needs of the specialist car and vehicle markets.**

As you would expect, we supply components of all sorts to OEMs in the the vehicle market. Axles, Wheels, Handles, Seats, Switches, Instruments, Engine components - to name but a few.

For example, our door hinges can be found on LTI London Taxi cabs, where reliability and durability is number one priority.

At a more sophisticated level, our electrically adjustable, automatically dimmed heated door mirror - which can be remotely folded back to avoid damage while parked - is very popular with premium quality car makers.

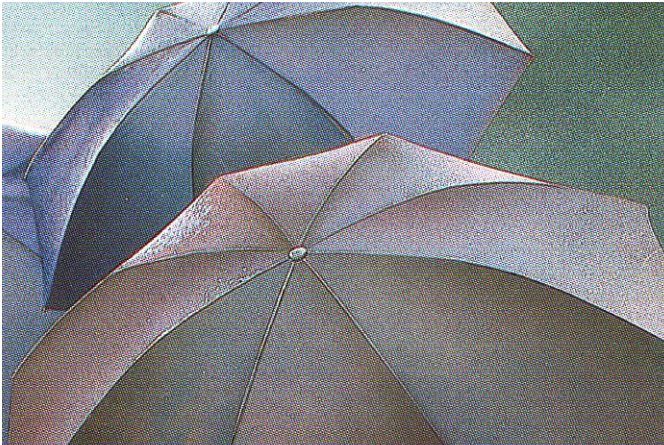

**Providing innovative solutions right across manufacturing industries.**

Perhaps more surprising is how Volkswagen Group components find their way into products that have no relationship with the automotive business.

For an umbrella manufacturer faced with the problem of making the central shaft watertight, a grommet seal from a Golf provided the ideal solution. Coil springs from the industrial range fitted the bill for children's ride-on playground toys - simply and economically.

We could go on.

**Chances are we've already invented it...**

**Spectacular choice for a wide range of manufacturing applications.**

Drawn from the massive resources of the Volkswagen Group - Europe's largest vehicle manufacturer - our portfolio of over 500,000 components covers:

- Engines
- Transmissions
- Fuel & Exhaust Systems
- Suspension
- Brakes
- Body & Trim
- Cables & Electrical

**So before re-inventing the wheel, check out what we have available.**

Whenever you are looking for that vital component - no matter what your application is - contact our Components Service.

As Volkswagen's sole UK distributor of industrial engines and components, we'll take your brief and carry out a search. If successful we can send you specifications, technical drawings, samples and of course prices, which you will find surprisingly competitive. Once your production supply requirements are established, our 'Just In Time' delivery service ensures you receive the right orders at the right time.

**Please use our on-line component enquiries service. There are over 300 separate component illustrations to choose from. Visit [www.mi-uk.com](http://www.mi-uk.com)**
