

Marshalls Industrial

With Industrial Engines, Automotive Engines, Transmissions and vehicle components we offer a complete solution.

Marshall's Industrial the largest independent Volkswagen Powersystems & Components Distributor in the world

Marshall's first enterprise in the motor business opened in 1936, specialising in component manufacturing, coach-building and servicing industrial plant machinery. In 1995, after 20 years of owning Volkswagen dealerships, we launched our dedicated Volkswagen Industrial Products facility in Wallingford, Oxfordshire. Since then, we have developed Marshall's Industrial into the largest independent Volkswagen Powersystems & Components Distributor in the world. We provide a service capability tailored to meet the specific needs of our OEM customers.

Whether you are in the design or development phase of a new product, or seeking an alternative power unit, which complies with the latest stringent emission controls, we can advise and respond on solutions to meet your needs. Our Sales Engineering Development staff have vast experience of Volkswagen Products in the Industrial and Automotive fields. We also

have the full support of Volkswagen's Industrial Division in Germany providing comprehensive technical specifications and drawings for your designs. From then on we're with you all the way - from supplying engines or components for prototypes and testing, right through to supporting your production models.

Being compact and light in relation to their power output, Volkswagen engines rarely encounter installation problems. However, we do provide a service whereby engines can be dressed to customers' individual requirements, which can also include the fitting of your own components. In this way, engines arrive at your assembly plant - ready for installation.

In the case of Automotive engines we can supply them with parts required to integrate them into your vehicles and if needed, draw on the expertise from development companies that carry out work directly for the Volkswagen Group.

MI
Marshall's Industrial

Automotive engines & Transmissions

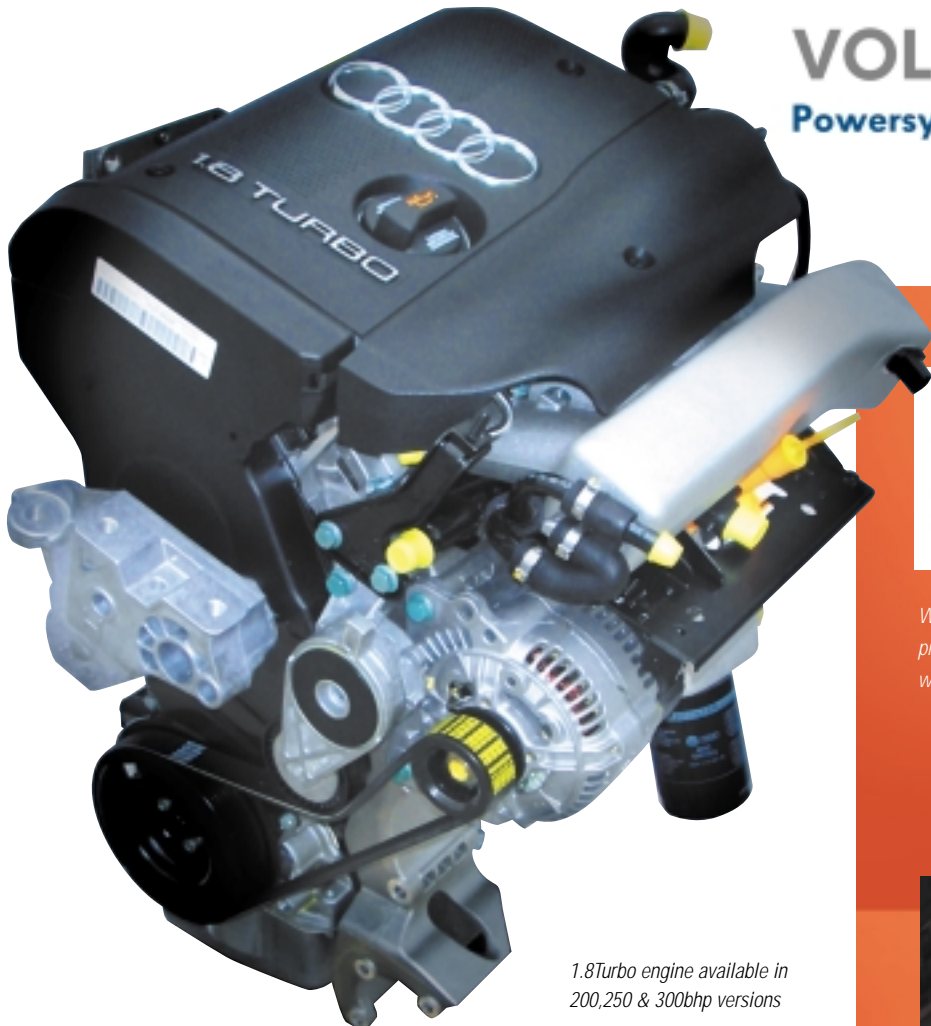

We can supply engines for automotive use with in-line transaxles & transverse transmissions.

Volkswagen Powersystems & Components

Automotive power, transmissions and vehicle type components

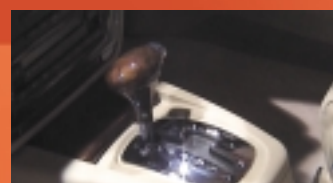

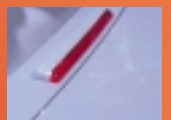

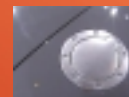

Engines and transmissions can be made available for OEM vehicle projects and with the wide range in use within the Volkswagen Group you have a fantastic choice. Working with Volkswagen Group and one of their approved development houses you can be sure of an integration that will provide you or your customers with the right solution.

VOLKSWAGEN Powersystems & Components

Whether it's 1 for prototype or 1000's for production with the selection available we should find your solution

1.8Turbo engine available in 200,250 & 300bhp versions

The TDI® 2.5 engine

Griffon Hovercrafts use two TDI® 1.9 engines in the Type 470 craft they build for the RNLI.

Industrial Engines

Volkswagen Industrial Engines

The drive for your ideas

The advantages are crystal-clear: engine technology proven a million times over. All Volkswagen industrial engines are backed by the experience, innovative expertise and R&D strength of one of the world's largest diesel engine manufacturers. Whether it's reliability, quality, technical standards, cost efficiency or environmental sensitivity - the Volkswagen Industrial Engine range with its high power to weight ratio is the perfect solution.

With more and more emphasis being placed on long term running costs, the term "downsizing" is being used more and more. With Volkswagen Industrial engines you can achieve your downsizing goals and provide your customers with a product that is not only fitted with a highly respected engine, but one that takes up less room, weighs less than most of the competition whilst giving better fuel economy and reduced running costs.

Linde Material Handling – one of the largest fork truck manufacturers in the world installs in excess of 25,000 Volkswagen Industrial engines a year.

The SDI® 1.9 and the TDI® 1.9 are available as power packs with turn key operation.

A powerful argument for cutting your development costs and time

With over 500,000 Volkswagen Group components at our fingertips, there's a pretty good chance of us being able to help meet your design brief - whatever manufacturing sector you cover. And, our top quality, ready-to-use components can make a considerable impact on reducing your development costs, as well as saving you valuable time.

We could be your most vital component

Spectacular choice for a wide range of manufacturing applications

Tested, proved and readily available.

Our components are manufactured to the highest standards of quality. They have all been rigorously tested and are being proved day to day in the Volkswagen Group's extensive range of world class vehicles - renowned for their reliability. In this way, we can assure you of good availability in whatever quantities you require.

Meeting the needs of the specialist car and vehicle markets.

As you would expect, we supply components of all sorts to OEMs in the the vehicle market.

Axles, Wheels, Handles, Seats, Switches, Instruments, Engine components - to name but a few.

Providing innovative solutions right across manufacturing industries.

Perhaps more surprising is how Volkswagen Group components find their way into products that have no relationship with the automotive business.

Whenever you are looking for that vital component - no matter what your application is - contact our Components Service.
